The City of Troy Missouri has been an MS4 (Municipal Separate Storm Sewer System) community since December 30th, 2016. The State of Missouri is entering their next MS4 permit period from 2021 through 2026. We are in the process of updating our Storm Water Management Plan (SWMP).

We will be using the State of Missouri Draft permit outline to development our SWMP along with our current SWMP to obtain our new permit for 2021-2026. A few examples in the updated version might include: under target audiences - Developers or construction site operators and Contractors. Under pollutants - litter and trash containment and sediment runoff from construction / land disturbance, marking storm inlets, using social media posts.
